

Introducing the New CBW-30000 Oil Hole Gasket

Cannon Bar Works Ltd. would like to introduce the new CBW-30000 Oil Hole Gasket that will now come standard with all C1 mount chainsaw bars.

Cannon currently offers the SuperBar, SuperMini, Carver, and Pruner Bars in the C1 mount, which is a combination of multiple mount patterns and fits on the majority of chainsaws on the market that are under 60 CC. Because the mount is able to fit on multiple saws, there are always mounting holes and oiler holes that are not being used and the possibility for some oil to leak out.

Some of the newer saws on the market, such as the Husqvarna 550XP, do not come with outside bar plates or solid sprocket covers, and this causes excessive oil to leak.

Cannon's solution to this issue is the CBW-30000 Oil Hole Gasket, which fits over the bar studs, alongside the mount of the bar, and stops oil from leaking out of unused oiler holes. This gasket will now be supplied with all C1 mount bars and additional gaskets will be available for purchase through any Cannon Bar Works Dealer.
